17 February 2012

Why Keyhole Gardens?

Keyhole gardens are a simple way to grow nutritious vegetables for home consumption.

A keyhole garden is a small kitchen garden that recycles as it grows. The design - which looks like a keyhole from above – is built around a central 'basket' into which compostable waste is placed and water is poured. Keyhole gardens are especially useful in areas where good soil is scarce.

Keyhole gardens have been very successful in improving nutrition and nutritional balance.

Keyhole garden can also be used for educational purposes, for example introducing children to growing vegetables.

The European Union supports keyhole gardens in Lesotho through different NGOs.

Programme

- 10:00** *Arrival guests*
- 10:15** *Welcome by MC*
- 10:20** *Speech by representative of Catholic Relief Services 'Keyhole gardens and food security'*
