EU Ambassadors visited the Incident and Emergency Centre of the IAEA

On 18 October, Ambassador Lenoir together with EU Ambassadors visited the Incident and Emergency Centre of the IAEA.

The global focal point for international preparedness and response to nuclear and radiological safety or security related incidents is a 24/7 facility operated by the IAEA and assisting Member States in Emergency Preparedness and response. EU Ambassadors discussed the cooperation with EU systems and individual Member States collaboration. 270 national contact points deliver the data; assessed, verified and communicated by the IEC in cooperation with Member States. EU Member States and the European Commission participate regularly in the Convention Exercises to test and improve the preparedness and response system.

Director Elena Buglova thanked the EU for the good cooperation and assured Ambassadors of continuous support of the IEC to MS.
